

Uber Metro Bundling Experience

Solving Fragmented First-Mile & Last-Mile Commuting for Pune Metro Users

Project Overview

Uber recently introduced in-app metro ticketing through ONDC, allowing users to purchase QR-based metro tickets directly within the Uber app. The feature aims to simplify urban commuting by combining public transit with Uber's existing first-mile and last-mile transportation services.

Currently, metro ticketing is available in cities such as Delhi NCR, Mumbai, Bengaluru, and Chennai. However, Pune—despite having an operational metro network, strong digital adoption and a large commuter population—is not yet supported.

This gap prompted an interesting product question:

How can Uber evolve from a ride-hailing platform into a complete multimodal mobility solution for daily commuters?

To explore this opportunity, I analyzed Uber's existing metro ticketing experience, identified user pain points in multimodal commuting and designed a proposed Metro + Uber Auto Bundle experience tailored for Pune Metro users.

The objective was to identify user pain points in metro commuting, analyze Uber's existing metro ticketing experience, and explore opportunities to increase metro adoption through an integrated "Metro + Uber Auto Bundle" experience for Pune Metro commuters.

This project also demonstrates how AI tools can be leveraged throughout the Product Management lifecycle - from user research and journey mapping to flow design, prototyping, documentation and roadmap creation.

Problem Statement

Current metro ticketing inside Uber operates as a standalone utility rather than a seamless commuting solution.

Users face:

- Low discoverability of metro ticketing
- Fragmented booking experiences
- Multiple apps for different commute stages
- Lack of integrated journey planning
- Pricing uncertainty
- Disconnected first-mile and last-mile transportation

The opportunity is to transform Uber into a single interface for complete urban mobility.

Based on the analysis, the proposed solution is an integrated Metro + Uber Auto Bundle that combines:

Auto → Metro → Auto

within a single booking flow.

User Persona and Jobs-To-Be-Done

Primary User -

Prerna (21 Years)

College Student

Pune

Daily Metro Commuter

 Name: Prerna Gaikwad Age: 21 Years Occupation: College Student Location: Pune	Prerna is a daily college student who travels from Ramwadi to Shivajinagar using a mix of autos and metro. She is cost-conscious but values predictable travel time to avoid being late for classes. Prerna is comfortable using apps but dislikes switching between multiple apps or dealing with last-minute fare surprises.	"Metro Bundle works because it shows users the trade-off at the moment of decision, not before."
Needs • Book auto + metro + auto in one flow • See total journey cost and time upfront • Avoid delays, ticket queues, and fare confusion • Reliable daily commute during peak hours	Challenges • Metro ticketing is hard to discover inside apps • Needs to mentally calculate multi-leg fares • First/last-mile autos feel disconnected from metro planning • Surge pricing creates uncertainty in daily budgeting	Day in the Life Prerna leaves home every morning around 8:30 AM and books an auto to Ramwadi Metro. She buys a metro ticket separately and hopes to find an auto quickly after exiting at Shivajinagar. On busy days, delays or fare surprises add stress. A single, predictable booking experience would make her commute smoother and more reliable.
Motivations Time: ★★★★★ Cost: ★★★★★☆ Reliability: ★★★★★★		

Job To Be Done

"When travelling by metro, I want a fast and reliable way to purchase tickets and manage my complete journey so that I can avoid switching between apps and reach my destination on time."

Problem Discovery

Tool - Miro AI

Link - <https://miro.com/ai/ai-overview/>

Prompt for Pain Points -

I am working as a Product Manager at Uber. Help me create sticky notes to understand the pain points of daily commuters, metro users, and first/last-mile riders in Pune when metro ticketing and local transportation are fragmented across multiple apps and booking flows.

Prompt for Mindmap -

I am working as a Product Manager at Uber. I want to solve the problem of fragmented metro ticketing and disconnected first/last-mile transportation in Pune. Create a mindmap to help me brainstorm all the factors, user pain points, features, operational challenges, integrations, and business considerations required to implement an integrated multimodal mobility solution inside Uber.

Interactive Miro Board -

https://miro.com/app/board/uXjVHOAvh4g=/?share_link_id=475875374563

Note - The complete mind map contains all branches and detailed insights. A static screenshot is included above for quick reference, while the interactive board can be accessed through the link.

User Journey

Tool - Diagram GPT

Link - <https://www.eraser.io/diagramgpt>

User Journey Diagram

Prompt -

I am a Product Manager at Uber working on improving the Pune Metro commuting experience.

Create a user journey diagram for an integrated Uber Metro solution where users can discover metro ticketing, plan first-mile and last-mile transportation, book metro tickets, complete payment, track their journey, and provide feedback within a single app.

The diagram should address key commuter pain points such as fragmented apps, disconnected booking flows, fare uncertainty, lack of journey visibility, and last-mile connectivity challenges.

Visualize the end-to-end journey across Awareness, Discovery, Journey Planning, Booking, Payment, Travel, and Post-Trip Feedback stages, highlighting how the integrated Uber experience simplifies multimodal commuting.

Interactive Diagram GPT Board -

Note - A static screenshot is included above for quick reference, while the interactive board can be accessed through the link.

User Journey Map

User Journey	Awareness	Login	Discover Metro Feature	Plan Complete Journey	Book Metro + First-Mile Ride	Payment & Confirmation	Travel & Tracking	Complete Journey & Feedback
User Actions (Activities)	Sees Uber notification/e mail promoting integrated metro travel	Opens Uber app and logs in	Explores app and discovers "Metro Tickets"	Searches source & destination and views integrated route options	Selects metro route, books metro ticket and first-mile ride	Reviews fare breakdown and completes payment	Takes first-mile ride, uses QR metro ticket, receives trip updates and completes last-mile ride	Rates journey and provides feedback
Sentiments (Thought Bubbles)	"Nice, one app for cabs and metro."	"Hope this is quick—I'm already late."	"I usually use another metro app. Let me see how this works."	"It's helpful to see my entire journey in one place."	"I don't need multiple apps anymore."	"Everything is booked in one transaction."	"I always know where I am in my journey."	"That was seamless from start to finish."
Emotions (Mood Meter)	😊 Curious	😐 Neutral	👀 Interested	😄 Engaged	😊 Satisfied	😁 Confident	😍 Delighted	😄 Very Delighted

Workflow Diagram

Tool - Whimsical AI

Link - <https://whimsical.com/ai>

Prompt for Data flow diagram

I am trying to solve the problem of a product called Uber. This is a multimodal mobility and transportation platform. The user problem I'm trying to solve is fragmented metro ticketing and disconnected first/last-mile commuting experience for Pune Metro users. Help me create a data flow diagram.

(Select Flow chart)

Prompt for Interaction Diagram

I am trying to solve the problem of a product called Uber. This is a multimodal mobility and transportation platform. The user problem I'm trying to solve is fragmented metro ticketing and disconnected first/last-mile commuting experience for Pune Metro users. Help me create an Interaction diagram.

(Select Sequence chart)

Whimsical AI Board Link -

Current State vs Proposed State

Capability	Current Experience	Proposed Uber Metro Experience
Metro Ticket Purchase	Counter, WhatsApp, TVM	In-app booking
First-Mile Travel	Separate booking	Integrated
Last-Mile Travel	Separate booking	Integrated
Payments	Multiple touchpoints	Single checkout
Journey Visibility	Fragmented	End-to-end tracking
Route Planning	Manual	Integrated multimodal planning

Uber has a unique opportunity to own multimodal mobility because it already controls first-mile and last-mile transportation.

Opportunity Prioritization

Opportunity	User Impact	Business Impact	Effort
Metro Discovery	High	Medium	Low
Metro + Auto Bundle	Very High	High	Medium
Rewards Program	Medium	Medium	High
Smart Commute Suggestions	High	Medium	High

Metro + Auto Bundle selected because it delivers the highest user value with manageable implementation effort.

MVP Scope

Included

- Metro Discovery Card
- Metro Ticket Booking
- Fare Comparison
- Uber Auto Integration

Not Included

- Dynamic Route Optimization
- Personalized Commute Suggestions
- Loyalty Rewards

PRD and Roadmap

Tool - Notion

Link - <https://www.notion.com/>

Prompt for PRD -

I am a product Manager with mid level experience. I want you to create a detailed PRD with all the relevant sections - make sure that it is in simple language and easy to understand. Ensure that all dependencies, risk are called out. Also ensure that as-in and future state is added. Add the metrics, goals and success measures in the PRD.

Help me create a detailed PRD of the problem - Despite Uber enabling metro ticket booking in major Indian cities, Pune commuters still rely on fragmented apps and disconnected first/last-mile travel planning, creating an opportunity for Uber to expand integrated multimodal mobility and improve commuter convenience

Output Link for PRD -

https://www.notion.so/PRD-Integrated-Metro-First-Last-Mile-Journey-Planning-for-Pune-Uber-b364ede0498a4998b3ce63cd75c45c11?source=copy_link

Prompt for RoadMap -

Create a detailed roadmap for the execution of this PRD. Make detailed tasks for frontend engineering, backend engineering, design, product and marketing. Set the tasks, risks and dependencies in the roadmap. Break the roadmap into weekly or bi-weekly tasks. Give tasks the right priority and also give the milestones to create the roadmap. Once you create the roadmap, assign the task, create the database and create a new page for the entire roadmap.

Output Link for Roadmap -

https://www.notion.so/Uber-Pune-Multimodal-Product-Expansion-Roadmap-988afdc0a9fb4e80a364c1dc0286431a?source=copy_link

Low Fidelity Wireframe

Tool - Visily AI

Link - <https://www.visily.ai/>

Prompt for ChatGpt -

I have done some analysis on the problem that I am going to solve. All the collaterals are added in the document attached. Give me a concise summary of what you can infer from this. I will use that content going forward to make low-fidelity, high-fidelity and fully functional prototypes for my product.

Follow up Prompt -

I'm going to create a low fidelity mock up using Visily.AI

I need your help to give me a screen by screen detailed prompt that I can enter inside Visily to create screens.

Output Link for Low Fidelity Wireframe - [Uber VisilyAI](#)

High Fidelity Mock up -

Tool - Google Stitch

Link - <https://stitch.withgoogle.com/>

Prompt for ChatGpt -

I'm now going to create high fidelity mock ups using Google Stitch. I need your help to give me a screen by screen detailed prompt that I can enter into Google Stitch to create the screens. I want one single prompt that I can enter and see all the screens ready in one go.

Output Link for High Fidelity Mock up - [Uber_Stitch](#)

Proposed Solution

Contextual Metro Discovery Instead of hiding metro ticketing inside menus: • Show Metro Card on Home Screen • Surface during rush hours • Detect proximity to metro stations Expected Impact Increase feature awareness and adoption.	Metro + Uber Auto Bundle Single booking flow: Home → Auto → Metro → Auto → Destination Benefits • One payment • One confirmation • Better convenience • Reduced booking friction	Transparent Pricing & ETA Compare: Option A - Uber Only Option B - Metro + Uber Bundle Show • Total Cost • Total Time • Savings Expected Impact Reduce decision fatigue and improve trust.
---	--	---

Success Metrics

Awareness

- Metro feature impressions
- Metro card CTR

Adoption

- First Metro Ticket Purchase Rate
- Monthly Active Metro Users

Engagement

- Tickets per User
- Repeat Usage Rate

Experience

- CSAT
- NPS
- Booking Drop-off Rate

Why Pune ?

Market Opportunity -

- 33 km operational metro network
- Students and IT professionals
- High commuter volume
- Strong digital adoption

Supporting Insight -

Approximately 75% of Pune Metro commuters already use digital ticketing solutions, making Pune a strong market for integrated metro booking experiences.

Validation Plan

Next Steps:

- Interview 10 Pune Metro commuters
- Measure bundle booking interest
- Run prototype testing

Current Limitations

- Assumptions based on secondary research
- No primary user interviews conducted
- No real-world validation of proposed solution

Key Learnings

- Feature Analysis
- User Research & JTBD
- User Journey Mapping
- Problem Prioritization
- Solution Design
- Metrics Definition
- Product Expansion Strategy
